PROFESSIONAL SUMMARY

Computer Science graduate (2025) with hands-on experience in full-stack web development, IoT systems, and real-time applications. Developed a Li-Fi-based audio/video communication system using Arduino, covering hardware design and signal modulation. Skilled in building scalable, data-driven solutions and solving complex technical problems. Seeking a software engineering role to contribute to innovative and high-performance applications.

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript
Backend	Python, Django
Database	SQL (ORACLE SQL)
Hardware/IoT	Arduino Uno, UART Communication, OOK Modulation, LED/Photodiode Systems
Tools	Git/GitHub, VS Code, CLAUDE AI

EDUCATION

B.E. Computer Science and Engineering DMI College of Engineering, Chennai	2021 – 2025
Higher Secondary Certificate (HSC) Shree Niketan Mat. Hr. Sec. School — 84%	2021
Secondary School Leaving Certificate (SSLC) Shree Niketan Mat. Hr. Sec. School — 81%	2019

KEY PROJECT

CricketConnect – Real-Time Cricket Match Management & Streaming Platform(FRONT-END) 2026

- Developed a full-stack web application for real-time cricket match management, live scoring, and player networking. Implemented ball-by-ball scoring with dynamic scoreboard updates, including run rate, projections, and match analytics. Integrated WebRTC-based peer-to-peer live streaming using PeerJS for real-time match broadcasting.
- Built an interactive ground finder using Leaflet.js with GPS-based mapping. Designed modular features such as player finder, match history tracking, and toss simulation. Focused on responsive UI/UX with modern CSS and optimized performance for seamless real-time interactions.

Key features

- Real-time ball-by-ball cricket scoring system with dynamic updates
- Live scoreboard with analytics (CRR, RRR, projections)
- WebRTC-based live streaming using PeerJS
- Ground finder with map integration (Leaflet.js)

IoT-Enabled Audio & Video Communication System Using Li-Fi (UG PROJECT)

2024 – 2025

Technologies: Arduino Uno, UART, OOK Modulation, White LEDs, Photodiodes

- Designed and built a full Li-Fi-based real-time audio/video communication system using visible light instead of radio frequencies, demonstrating a working alternative to conventional wireless networks.
- Implemented hardware signal encoding using On-Off Keying (OOK) modulation with white LEDs as transmitters and photodiodes as receivers, achieving stable data transmission between two Arduino Uno nodes.
- Integrated UART serial communication protocol to synchronize data transfer between hardware modules, enabling low-latency audio and video streaming over the light medium.
- Presented the project at national-level symposiums, demonstrating technical depth in embedded systems and IoT architectures.

INTERNSHIP EXPERIENCE

SAP Intern

2023

Daejoo Automotive Pvt. India Ltd

- Gained hands-on experience with SAP ERP server operations within an automotive manufacturing environment.
- Assisted in data entry, system navigation, and module-level operations on the SAP platform.
- Developed understanding of enterprise resource planning workflows and real-world industrial IT infrastructure.

CERTIFICATIONS

- Python Full Stack Development — NPTEL
- Big Data & Python — NPTEL
- Full Stack Web Development Workshop — College Program
- AR & VR Technologies Workshop — College Program

ACHIEVEMENTS & RECOGNITION

- 🏆 Won 2nd Prize in Debugging — National Level Technical Symposium, DMI College of Engineering
- 📄 Presented paper on Cloud Computing — National Level Symposium, St. Joseph College of Engineering

LANGUAGES

English (Professional Proficiency)

Tamil (Native)
